

## **LISTING OF THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An accessory mount for an electric toothbrush having a motor which is arranged ~~[[in]]~~ completely within a handpiece for driving vibration-generating means that extends from the handpiece, comprising: an elongate protective cover attachable to the handpiece and configured so as to have an elongate portion exterior the handpiece and so that the vibration-generating means are arrangeable in an interior of the elongate protective cover; and a sleeve fitted onto the protective cover so as to cover the protective cover over at least part of its length.

2. (Previously Presented) An accessory mount as defined in claim 1, wherein the sleeve covers the protective cover over substantially its entire length.

3. (Original) An accessory mount as defined in claim 1, and further comprising an elastic ring arranged to connect a bottom end of the protective cover to the handpiece.

4. (Currently Amended) An accessory mount as defined in claim 1, and further comprising an accessory for cleaning an oral cavity, attachment means at one end of the sleeve for removably attaching the sleeve to the protective cover, and holding means at an opposite end of the sleeve for holding the accessory for cleaning an oral cavity.

5. (Original) An accessory mount as defined in claim 4, wherein the opposite end of the sleeve is oriented obliquely with respect to a longitudinal axis of the sleeve.

6. (Original) An accessory mount as defined in claim 5, wherein the angle between an end region of the sleeve and the longitudinal axis is 8° to 20°.

7. (Original) An accessory mount as defined in claim 4, wherein the holding means includes a part which has a receiving opening for accommodating the accessories.

8. (Previously Presented) An accessory mount as defined in claim 7, wherein the receiving opening has a polygonal shape.

9. (Previously Presented) An accessory mount as defined in claim 8, wherein the opening is square.

10. (Previously Presented) An accessory mount as defined in claim 7, wherein the receiving opening has an uninterrupted perimeter.

11. (Original) An accessory mount as defined in claim 4, wherein the accessory is an oval brush.

12. (Previously Presented) An accessory mount as defined in claim 4, wherein the accessory is formed by a rotatable piece with a conical tip.

13. (Original) An accessory mount as defined in claim 4, wherein the accessory is a holder in which dental floss is secured.

14. (Currently Amended) An electric toothbrush comprising: a hand piece; vibration-generating means that extend from the handpiece; a motor arranged [[in]] completely within the handpiece for driving the vibration generating means; and an accessory mount having an elongate protective cover releaseably attached to the handpiece so as to have an elongate portion exterior the handpiece and, the vibration generating means being arranged in an interior of the elongate protective cover, and a sleeve fitted onto the protective cover, so as to cover the protective cover over at least part of its length.
